Instructions – how to run the Xampp server

If you do not have installed Xampp in your device, download here: https://www.apachefriends.org/download.html

Also depends which version is suitable according to Operating System and architecture (32/64 bit).

Step 1

- open your hardive

- find „xampp" folder (if you did not change it during installation).

- open it

xampp-control.log	12/18/2017 12:28 ...	Text Document	195 KB

Step 3

- Start Apach

- Start MysQL
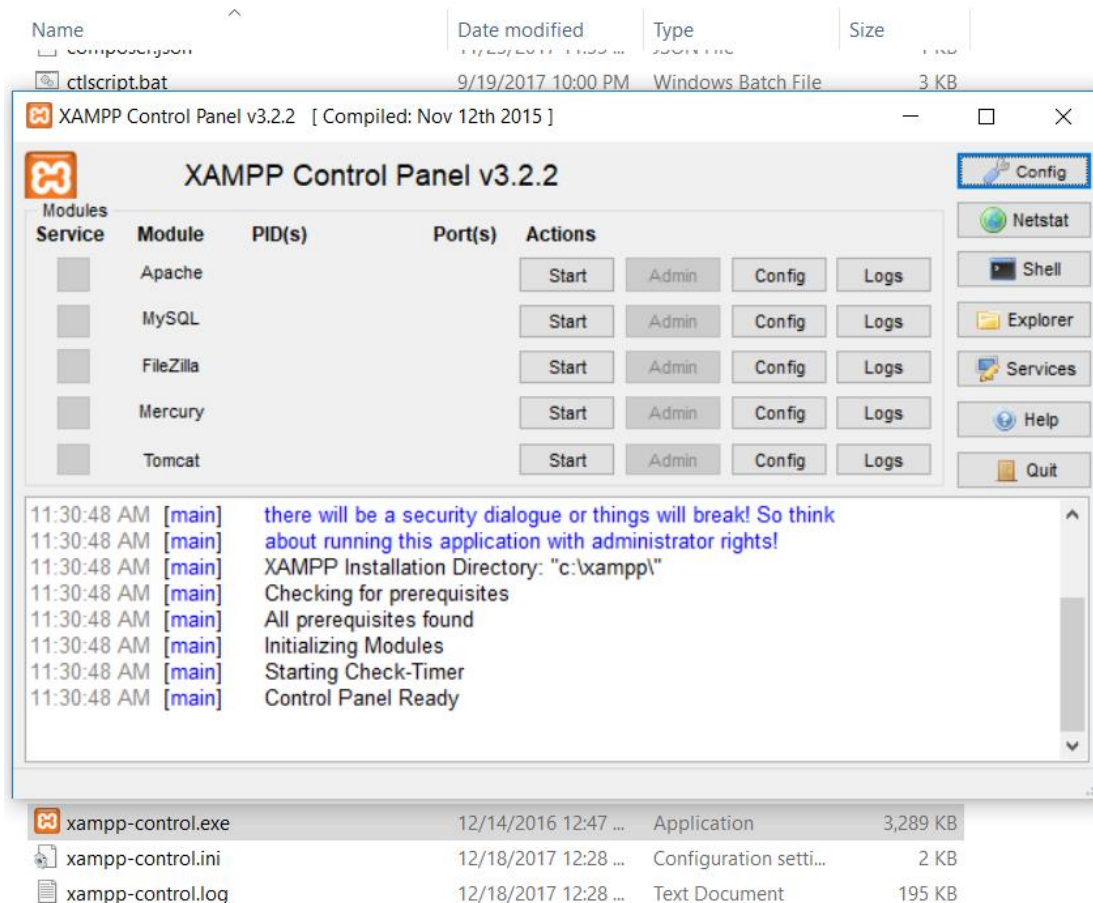

- close application and run it again

- now, you can connect on „phpmyadmin" and work with database... Good Luck !!!
